SUMMARY

Data-driven marketer with a background in English Literature and Applied Statistics. Across three roles in Canada and Korea, I have selected targets from data, designed the message, and measured the response — from scoring 200 B2B leads in Toronto to turning 327 program applications into a live Looker Studio dashboard. Bilingual in Korean and English.

EXPERIENCE

SNS Content Marketing Intern — Eeun Contents (Eeunbook), Seoul Sep 2026 – Present

- Plan and produce target-specific Instagram card news and Reels for a book publisher, defining audience, objective, hook, and creative direction for each piece.
- Produced a book-fair (ACC) Reel that earned 41 likes, about 4x the account average (~10), and prompted a viewer to place an online order.
- Built a content workflow (key message → page structure → AI-assisted copy draft → review and design) and automated repetitive book-data tasks.

DB Analysis Manager / Deputy Planning Manager — Tour de Force (JOINUS KOREA), Seoul Jul 2025 – Jun 2026

- Restructured 327 applications from 7 cohorts and 49 countries with Google Apps Script: one row per participant, standardized age, gender, and country codes, and flagged error records.
- Built a live Looker Studio dashboard; insights (spring/summer peak, ~77% solo applicants, 20s–30s core segment) informed staffing, scheduling, and country-specific promotion.
- Cross-analyzed 20+ guides × 13 tour themes in R (ggplot2) to classify content as Core, Growth, Low Priority, or High Risk and decide which tours to promote first.
- Planned and ran cultural-exchange programs, including two Homecoming Day events with 40+ participants each; ~90% of attendees rated them “very satisfied.”

Digital Marketing Assistant Intern — Tamwood International College, Toronto, Canada Jul 2022 – Jul 2023

- Analyzed 200 dental clinics via Google Maps and websites to pitch Google Business Profile and SEO services (B2B).
- Designed a lead-scoring model on 6 weighted criteria (rating, reviews, website quality, online booking, English support, etc.), scoring leads 1–100 into High / Medium / Low tiers.
- Wrote personalized Hook → Pain Point → Solution → CTA outreach and ran 10+ calls and emails per week from a standardized CRM lead database.

PROJECT

Consumer Boycott Analytics Dashboard — R, Shiny · inhakim.shinyapps.io/boycott_project

- Analyzed survey data from 200+ respondents to measure how 5 boycott types (labor, gender, political, owner risk, environment) affect brand trust and purchase intent using correlation and regression in R.
- Found trust drives purchase most for labor (β=.80) and gender (β=.76) issues but least for environmental issues (β=.41), and turned this into type-specific marketing strategies.
- Built an interactive Shiny dashboard to visualize results for data-driven decision-making.

EDUCATION

Chung-Ang University — B.A. English Language & Literature, Double Major in Applied Statistics Mar 2021 – Aug 2026

Université de Montréal — Exchange Student, Montréal, Canada Jul 2024 – Jul 2025

SKILLS & LANGUAGES

Data: Google Sheets, Google Apps Script, R (ggplot2, Shiny, regression, k-means), Looker Studio, Excel, GA4 (in progress)

Marketing: Lead scoring, audience segmentation, A/B test design, CRM outreach, SNS content (card news, Reels), KR/EN copywriting, Canva

Languages: Korean (native), English (fluent; TOEFL iBT 90, OPIc IH)
